

Engineering

We offer support in projects or take on subprojects as a development partner specializing in medical systems and in-car computing.

"We can look back on a successful cooperation especially in the areas of project estimation, the concept phase, design and architecture, and implementation."

Klaus Dehmel Department Manager Software, Grundig Car InterMedia System GmbH [1]

Our strengths implementing modern technologies and methods:

- **Project management:** we execute your projects using current tried and tested project management methods.
- **Know-how sourcing:** we keep your team up-to-date with targeted knowledge transfer during project execution.
- **Software development:** we work with methods that increase efficiency in software development projects.
- **Processes and quality assurance:** we implement suitable processes and guarantee a high standard of quality in executing your projects.

Quality Assurance

We implement projects using the latest technologies, methods and standards. The active exchange of knowledge and the interaction between our Engineering and Consulting teams ensure that the expertise of our engineers remains at a high level.

Fixed Price Assurance

We provide reliable fixed-price projects which are carried out using suitable processes. This allows us to implement software projects in a transparent way and with an awareness of risk.

Development Assurance

We develop alongside our customers – new requirements and profiles are implemented by us immediately.
