

## Metrics

Making quality measurable.

Stages now features integrated metrics, providing you with a cockpit to steer your projects and processes. Real-time reporting capability affords project participants access to all benchmark figures, metrics, and many analysis options. These convenient control features put you in the driver's seat.

### The highlights

#### Metrics catalog

The metrics catalog helps you choose the right benchmarks for your project and processes, quickly and easily. It encompasses a collection of standards such as ISO/IEC 15504 (SPICE) and CMMI®, among others.

#### Visualization

You can visualize and format metrics using tables, diagrams, charts, and texts. Dynamic queries, filters, and user-specific parameters serve to create interactive graphics, reports, and cockpits.

### Analysis

With Stages, you can analyze metrics across projects, thereby monitoring your processes' quality. It even tracks trends and archives them in the integrated metrics database.

## Reporting

A convenient user interface lets you design and create reports quickly and easily. You can drag-and-drop data sources with diagrams and tables into the layout and format reports as you see fit. Flexible extension options let you generate even very complex reports.

## Exporting

You have several format options for exporting reports – Microsoft Excel®, Microsoft Word®, Microsoft PowerPoint®, and Adobe Acrobat PDF®.

## Distribution

Reports are generated in real time, ensuring they are always up to date. Stages' authorization mechanism protects reports against unauthorized access.

## Technical info

### Types of data sources

JDBC databases, ODBC databases, XML, Text files, Microsoft Excel®, Web Services, JavaScript, Java objects.

### Types of charts

Bar, line, area, stock, pie, Gantt, bubble, meter, difference, tube, pyramid, scatter.

### Further layout options

Tables, pivot tables, graphics, texts.
